

Pale or Smooth Flax-lily *Dianella longifolia* var. *longifolia*

Flowers: August to January. H 50-80cm - W Spreading up to 50cm.

Pale or Smooth Flax-lily forms a loose tuft with long strap-like leaves. Produces clusters of small pale blue star-shaped flowers on tall stems that may reach a metre high. Followed by blue/purple berries. Suitable for moist well drained soils in full sun to shaded positions. Like most *Dianella* species they can be divided once the clump is large. Responds well to extra watering in summer. Drought tolerant once established. Its cousin *D. tasmanica* is noted as being salt tolerant
