

# Yellow Hakea *Hakea nodosa*

*Flowers: April to August - H 1-3m x W 1-2m*

Tolerates most soil types, including clay & sandy soils. Soft leaves & masses of yellow flowers make it an effective hiding & feeding place for small nectar seeking birds. Following flowering it produces woody seed capsules. Regular light pruning helps to maintain a regular shape & produce denser foliage. Yellow Hakea tolerates dry positions & is not long-lived.
