

Weeping Grass *Microlaena stipoides*

Flowers: September to March. H 30cm Seed heads to 1m.

Soft lush grass suited to well drained moist soils thriving in shaded areas often used to lawn deep shaded areas. Tufting or matting its size can be variable depending on the local conditions; takes very well to regular mowing. Deep-rooted, hardy & drought tolerant. Self sows & spreads readily to other suitable areas. There are two different forms of Weeping Grass across the sandbelt that vary in height. The seeds often catch in socks & other clothing which can be annoying.
