

# Twiggy Daisy-bush *Olearia ramulosa*

*Flowers: September to June. - H 1-2m x W 1.5m.*

Small to medium open, sometimes sprawling shrub with tiny aromatic leaves and masses of white (more common) or mauve flowers. Long flowering period from from spring to late autumn or winter. Prefers well drained soils, even primary dune areas. Takes well to pruning after the flowers fade stopping the plant from becoming straggly & can prolong the flowering. Propagates readily from cuttings. Good understorey plant.
