

# Kangaroo Grass *Themeda triandra*

*Flowers: October to February. H 1.5m x W 70cm.*

Grows in full sun to part shade on sandy to clay soils & needs little water once established. Leaves develop an orange to red or purple tinge in winter and turn green in spring & summer. The attractive foliage and seed heads make Kangaroo grass ideal as an ornamental in rockeries and native gardens. Like most tussock grasses planting in spaced clumps will give good landscaping values. Kangaroo Grass is long lived.
