

Golden Spray *Viminaria juncea*

Flowers: October to February. H 2.5 - 5m x W 2m.

Slender erect tall shrub to small tree usually forming one trunk with soft weeping branches. Leaves are insignificant but the foliage is attractive. Blooms with long drooping sprays of yellow & red pea flowers. Prefers full sun to semi shade in poorly drained soils around wetlands & moist depressions. Fast growing & amenable to some light pruning. Noted as losing its vigor around the 5 year mark & may become untidy & scrappy. Will grow in drier positions if watered through the dry periods.
